## About Page

This is a simple demonstration of React Router.

## Welcome to Our React Demo

### React Components

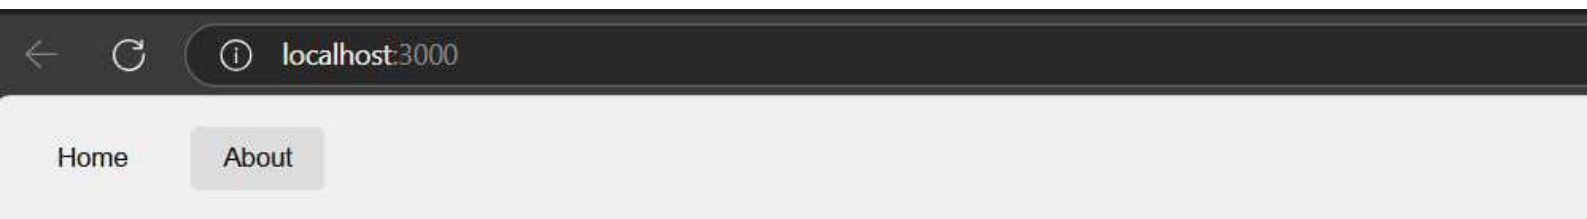

Components are the building blocks of React applications.

### React Router

React Router enables client-side routing in React applications.

### Props

Props are used to pass data from parent to child components.

# About This Demo

This is a simple React application that demonstrates:

- Component-based architecture
- React Router for navigation
- Reusable components with props
- Basic styling with inline styles

Feel free to explore the code and learn how these concepts work together!
